4. Instructions for Use

【Measurement of cylindrical workpieces (Figure 1)】

Example 1)

Place the product on a Reference Surface Plate and position the workpiece in the V-groove.

Bring the contact point of a dial gauge into contact with the workpiece to measure parallelism or eccentricity.

Note: When measuring, move the stand with the dial gauge by sliding it on the Reference Surface Plate.

【Use as a Parallel Block (Figure2)】

Example 2)

Place this product on a Reference Surface Plate with the top surface facing upward.

Place the workpiece on top, and use the measuring tip of the dial gauge to measure parallelism and straightness.

Note: During measurement, move the stand holding the dial gauge smoothly by sliding it on the Reference Surface Plate.
